OEM Inductive Modem Couplers

The OEM Inductive Modem Coupler allows manufacturers to add S9 inductive modem technology to their custom pressure housings. The coupler includes a pressure penetrator designed for 5000 PSI with an o-ring face seal to the customer's pressure housing.

We currently offer OEM couplers in three standard sizes and we can produce couplers in custom sizes. Our standard sizes are 15mm, 15mm extended length and 25mm. These dimensions refer to the maximum cable diameter which can pass through the coupler.

All three coupler options fit the same housing machining pattern.

15mm Coupler #50153
